                                                                                                                                                                                                                                                                                                                          /note-"Organ: Eye; Vector: pSPORTI; Neural retina tissue /note-"Organ: Eye; Vector: pSPORTI; Neural retina tissue was dissected from two 80 year old donors with no observed eye disease. 100ug of total RNA was used for library construction. A directionally cloned cDNA library in the pSPORPI vector (Life Technologies) was constructed at Bioserve Biotechnology (Laurel MD) essentially following the protocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pGACTAGTTCTAGARCGCGCCCC(T)15-3']. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."

The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand CDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand course of the coll was trand the day of the coll was tranded by the coll was tranded to the co
                                                                                                                                                                    converted to a DNA strand by Okayama Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF by electroporation method The cDNA libraries constructed by this method are full-length enriched cDNA library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /clone_lib="S18N669761"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC may be used to treat or prevent disorders associated with decreased CC expression or activity of IMOL, such as immunological disorders associated with decreased CC (e.g. inflammation, actinic keratosis, AIDS, Addison's disease).

CC haematopoletic cancer, infections caused by virus (e.g. adenovirus, CC parvovirus, coronavirus), bacteria (e.g. Staphylococcus, Streptococcus, CC Shigella), fungi (e.g. Aspergillus, Blastomyces), parasites (e.g. CC Plasmodium, Trypanosoma, intestinal protozoa), cell proliferative CC disorders (e.g. actinic keratosis, arteriosclerosis, bursitis), and CC cancers (e.g. leukemia, melanoma, sarcoma). The peptides are also CC useful as immunogens for the development of antibodies that CC specifically recognizes these peptides. The polynucleotides may be used CC to detect and quantify gene expression in biopsied tissues in which CC expression of IMOL may be correlated with the disease, as targets in a CC compounds in drug screening techniques. Antibodies which specifically CC carrier and affected individuals, and for screening libraries of CC compounds in drug screening techniques. Antibodies which specifically CC bind to IMOL may be used for the diagnosis of disorders characterized CC with IMOL or agonists, antagonists, or inhibitors of IMOL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

The invention relates to the human zacrp3 protein (AAB29580) and to nucleic acids which encode it (AAC64058, AAC64063). Zacrp3 is a homogue of adipocyte complement related protein (ACRP30) and contains a collagen-like domain comprising Gly-Xaa-Xaa or Gly-Xaa-Pro repeats, and C-terminal Clq domain comprising 10 beta-strands. The zacrp3 gene is located on chromosome 5pl2. The invention also relates to zacrp3 fragments, fusion proteins containing zacrp3 polypeptides, zacrp3-specific antibodies, expression constructs and host cells comprising zacrp3 nucleic acids, and methods of recombinant production carcrp3. Human zacrp3, and its agonists and antagonists may be used in the study and modulation of cellular metabolism and energy balance in
                                                                                                                                 anorexia, and conditions associated with these disorders. Due to its Clq like domain, zacrp3 and zacrp3-containing fusion proteins may be useful as antimicrobial agents, promoting lysis or phagocytosis of infectious organisms such as bacteria or viruses. Zacrp3, its fragments, fusion proteins, antibodies and activity modulators may also be used to inhibit collagen-induced platelet aggregation, adhesion, or activation, and may therefore have potential for promoting blood flow within the vasculature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel zacrp3 polypeptides used to treat or prevent bacterial infections, for wound healing, improving blood flow, and to a energy efficiency in mammals -
                                                                                        of a mammal e.g., to treat injury to the vasculature or other collagenous tissue. Human zacrp3 and its antibodies may additionally be used to study

                                                                                                                                                                                                             The present sequence represents a secreted or transmembrane polypeptide.
CC The specification describes polypeptides designated PRO1484, PRO4334,
CC PRO1122, PRO1889, PRO1889, PRO1887, PRO4785, PRO4353, PRO4435, PRO4435, PRO4435, PRO4356, PRO4356, PRO4350, PRO4350, PRO4350, PRO4424, PRO4409, PRO4409, PRO5737, PRO44425, PRO5900,
CC PRO6030, PRO4424, PRO4422, PRO4430 and PRO4409, PRO51889 polypeptide is
CC useful for diagnosing tumour in amammal. The polypeptides, their
CC appoints and antagonists are useful treating a condition associated with
CC expression or activity of the polypeptide. Conditions treated include
CC expression or activity of the polypeptide. The polypeptides are
CC capable of inducing proliferation of mammalian kidney mesangial cells
CC and are therefore useful for treating kidney disorders associated with
CC decreased mesangial cell function such as Bergers disease or other
CC dermatitis herpetiformis or Crohns disease. The nucleic acids may be used
CC to generate transgenic animals for use in development and screening of
CC therapeutically useful reagents and also for chromosome identification
CC and tissue typing.
                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    27 APR 1999

                                                                                                                                                                                                                                                  (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and antagonists) of expression and activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  which encode human secretory or membrane proteins represented by AAB88317 - AAB88419. Included in the invention are primers AAB88317 - AAF82235 which are used to isolate aAAF93917 - AAF94295 and AAAF62232 - AAF62235 which are used to isolate cDNA sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory
                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                          arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding secretory proteins/membrane proteins, useful in gene therapy or as candidate target molecules in drug development -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ota T,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (HELI-)
